

Operating & Safety Guidelines Boiling Rings/Tops

Never operate electrical switches with wet hands.

Only qualified or trained personnel should use this appliance.

Always switch off and unplug the equipment from the power supply before moving or cleaning.

ELECTRICAL SAFETY

- The equipment is designed to plug directly into a standard 240volt, 13 amp socket.
- Make sure the equipment and power socket are switched off before plugging into the power supply.
- Keep the power cable out of harm's way.
- Extension leads should be unwound fully, never run them through water, over sharp objects or where they may be a trip hazard.
- Use a suitable RCD (Residual Current Operated Device) to reduce the risk of electric shock.

OPERATING GUIDE

- Connect the appliance to an electricity supply. The green neon indicates power to the appliance. Turn the control knob to the desired setting.

EQUIPMENT CARE

- Always ensure there is sufficient water to cover the heating element, but never overfill or it could boil over.
- Do not let the unit boil dry, the heater element may burn out.
- Once you have finished with the unit, switch off and unplug. Allow the unit to cool completely before draining off as much water as possible via the dispensing tap.
- Any remaining water can then be tipped out.
- Pour some clean cold water into the unit, swill it around the tank and run it off via the tap.

CLEANING

- Disconnect from the mains supply before cleaning and allow the rings to cool.
- Do not use sharp objects, metal scrapers, wire brushes or wire wool pads as they can scratch the steel
- Do not use bleach or any corrosive detergent as they will damage the surface of the unit. Rinse thoroughly and finally wipe the exterior with a damp cloth.
- Do NOT Immerse the appliance
